

I live in an area where regular radio and television reception is poor. XM radio has been a blessing to me, and I am telling others about XM. I don't know if the NAB is trying to do away with XM all together, or just the traffic and weather channels. If all together, what's next? (Cable/Satellite Tv, Cell Phones, GPS devices, Internet service)

Truckers rely on a number of devices, such as XM radio, CB radio, Ham radio, Business radios, GPS, and satellite lap tops, to keep them informed of where they are, and what's going on. I strongly urge the F.C.C. to reject petition 04-160 as well as B.P.L.
